13. SUPPLEMENTARY NOTES

14. ABSTRACT

This document provides a report of the impact of the fiscal year 2015 (FY15) TRAC-Monterey (TRAC-MTRY) work program, the plan, results, and recommendations for the FY16 research elicitation, and the proposed FY16 TRAC-MTRY work program. The methodology used to develop the FY16 TRAC-MTRY work program starts with analyzing the impacts of the FY15 work program using a topic, technology, methodology (TTM) framework that examines the effects of TRAC-MTRY projects in terms of five TRAC work categories. The FY16 research elicitation consists of both a formal elicitation of research ideas from across TRAC using interviews and a workforce survey, and an informal elicitation of research needs from organizations both within TRAC and across the Army. Finally, we develop the proposed FY16 work program, assess it against the TTM framework against our established TRAC work categories and present the impacts here. A full listing of FY15 projects completed can be found in \autoref{tab:fy15projlist}. A listing of FY16 projects which are currently in the beginning stages of research can be found in \autoref{tab:fy16projlist}. This is the FY16 work program that will be executed pending any changes to priorities or additional projects that require immediate research.

Executive Summary

Overview

This document provides a report of the impact of the fiscal year 2015 (FY15) TRAC-Monterey (TRAC-MTRY) work program, the plan, results, and recommendations for the FY16 research elicitation, and the proposed FY16 TRAC-MTRY work program. The methodology used to develop the FY16 TRAC-MTRY work program starts with analyzing the impacts of the FY15 work program using a topic, technology, methodology (TTM) framework that examines the effects of TRAC-MTRY projects in terms of five TRAC work categories. The FY16 research elicitation consists of both a formal elicitation of research ideas from across TRAC using interviews and a workforce survey, and an informal elicitation of research needs from organizations both within TRAC and across the Army. Finally, we develop the proposed FY16 work program, assess it against the TTM framework against our established TRAC work categories and present the impacts here. A full listing of FY15 projects completed can be found in Table 1. A listing of FY16 projects which are currently in the beginning stages of research can be found in Table 1. This is the FY16 work program that will be executed pending any changes to priorities or additional projects that require immediate research.

Results

The FY15 TRAC-MTRY work program involved impacts in the areas of method and data improvement, specifically in data analytics methodologies, human dimension analysis, measurement space analysis, technologies of the Person Data Event (PDE) system, GINA/Dragon Pulse, and the Executable Architecture Systems Engineering (EASE) system. The FY16 work program is planned to continue work with the PDE and GINA, and investigate more data analytics, wargaming, and data visualization methodologies. The work program remains flexible by not completely using the FY16 total analyst capacity up front. Instead, some room is left to conduct short-term or quick-turn analyses that may be required by TRAC, TRADOC, or the Army. Additionally, there is room if further funding becomes available for projects that fit TRAC research priorities and provide acceptable impact to TRAC. The FY16 TRAC-MTRY work program offers some great opportunities to expand knowledge sharing and to integrate into the analytic work being conducted by the rest of the TRAC centers through stakeholder interaction, continued TRAC-MTRY support for measurement space drills, and engagement with the TRAC centers on past research conducted to help improve OR analysis across the organization.

TRAC-Monterey FY16 Work Program Development and Report of Research Elicitation Chapter 1 Introduction

Overview

This document provides a report of the impact of the fiscal year 2015 (FY15) TRAC-Monterey (TRAC-MTRY) work program, the plan, results, and recommendations for the FY16 research elicitation, and the proposed FY16 TRAC-MTRY work program.

Background

At the end of FY13, TRAC-MTRY conducted a research priorities elicitation from across TRAC in order to support development of the research council's FY14 research priorities. In FY14, TRAC-MTRY conducted another research elicitation to capture the lessons learned from the elicitation conducted in FY13. Through this process, it became apparent that the research elicitation is a very good opportunity for TRAC-MTRY to become familiar with the operations and studies of all the TRAC centers. Because TRAC-MTRY needs to ensure that its work program is relevant to TRAC as a whole, the research elicitation becomes another opportunity to synchronize TRAC-MTRY's operations into the missions that each of the TRAC centers face, as well as to communicate the research that TRAC-MTRY has conducted that would be useful to the TRAC centers if implemented.

Research Topics. Additionally, the research elicitation offers prospects of interesting research ideas that can be pursued to support not only TRAC, but the Army in general. TRAC-MTRY elicits these ideas, prioritizes them, and then develops a work program that incorporates those research ideas in a framework that potentially has the largest impact on TRAC capabilities to conduct analysis for the Army.

² Teter, Michael D., Smith, Christopher M. *TRAC FY15 Research Planning and Elicitation*. Technical Report TRAC-M-TM-13-059. 700 Dyer Road, Monterey, CA 93943-0692, 2013.

Problem Statement

TRAC-MTRY annually develops a work program consisting of research projects that provide high impact, relevant, and credible additions to TRAC's capability to conduct operational analyses.

Project Methodology and Timeline Overview

As stated, this is an annual effort that builds on the previous years work and is constantly analyzed to ensure the process remains appropriate to providing the most relevant research to TRAC. In general, research ideas are elicited from several sources, both inside TRAC using the formal annual research elicitation and from agencies across the Army and DOD. These ideas are analyzed for their relevance and ability to impact TRAC operations as well as the possibility that each idea will yield sponsors and have an appropriate amount of stakeholders to measure the worth of the research idea against the resources required to execute the research. Additionally, the analysis provides insights into TRAC's research objectives and priorities. Projects are formed from those ideas deemed of high value and sponsors secured. These projects are balanced against the amount of resources available, in terms of TRAC-MTRY analyst capacity and funding available to fund student and faulty research at the Naval Postgraduate School (NPS), the Air Force Institute of Technology (AFIT), and other graduate institutations. Once complete, the project schedule is developed and published, assigning analysts and resources to each project.

Methodology

The TRAC-MTRY research elicitation drives the TRAC-MTRY work program. We use the Topics, Technologies, and Methodologies Framework to choose projects that have the most impact in the areas of greatest interest to TRAC.

The Topics, Technologies, and Methodologies Framework for Measurement of Impact

Research ideas are considered on the basis of the type of topic the potential project would delve into, a specific technology that may be emerging as an important future analytical tool, or the methodology the potential project would. The extent of the impact in one or more of the areas of topic, technology, and methodology is measured by showing how the project contributes in each of these areas to the specific work areas in which TRAC engages. We have derived five categories, or main analysis areas, into which all work done within TRAC can fall. These categories are largely based on the TRAC's billable project codes. Definitions for the five categories are shown in Table 1.

Table 1. Five General Catagories of Work Within TRAC Centers (FLVN, WSMR, LEE)

| Category Number | TRAC Work Categories | Explanation |
|-----------------|----------------------------|--|
| 1 | TRAC Analysis | Work in support of TRAC Studies and Analysis |
| 2 | External Support | Research and analysis for other organizations |
| 3 | Method & Data Improvement | Work in support of methods and data used for TRAC Analysis |
| 4 | Model Improvement | Work in support of models used for TRAC Analysis |
| 5 | Organizational Improvement | Research and activities to improve TRAC |

A roll-up of all the TRAC-MTRY projects and their projected impact is shown in the topic, technology, methodology to work category grid. An blank example of the grid is given in Figure 1.

| | Topic | Technology | Methodology |
|---------------------------|-------|------------|-------------|
| TRAC Analysis | | | |
| External Support | | | |
| Method & Data Improvement | | | |
| Model Improvement | | | |
| Organization Improvement | | | |

Figure 1. Example Impact Grid showing how the impacts of Topics, Technologies, and Methodologies interrelate with TRAC work categories.

Report Organization

The remainder of this report is organized to first show the impact of the previous year's project slate, the results of the current year's research elicitation, and the projected slating for the next fiscal year's project schedule at TRAC-MTRY. In chapter 2, we explain the impact, in terms of topic, technologies, and methodologies, that TRAC-MTRY's projects have provided over the fiscal year 15 to TRAC in the main analysis areas listed in the methodology. Then chapter 3 develops the plan, methodology, and results of the FY16 research elicitation. The next chapter, chapter 4, shows the projects proposed as the FY16 TRAC-MTRY work program and the potential impact of these projects on TRAC's main analysis areas or work categories. Finally, chapter 5 summarizes the TRAC-MTRY work program.

Chapter 2 Impact of TRAC-Monterey FY15 Projects

Table 1. FY15 Project List

| Project Code | Project Name | End Date | Tech Rep/Memo Number | Cost (Approx.) |
|--------------|---|----------|---------------------------------------|----------------|
| 060033 | Behavior Validation Methodology for COMBATXXI | 30MAR15 | TRAC-M-TR-15-013 | \$ 179,420.00 |

| 020306 | Measuring Force 2025 Logistic Flow | 31DEC15 | TBD | TBD |
| 040034 | Innovative use of gameplay | 31DEC15 | TBD | TBD |
| 060112 | TRAC Knowledge Management Effectiveness Model | 31DEC15 | TRAC-M-TM-15-036 | \$ 128,000.00 |
| 060121 | Global Assessment Tool (GAT) 2.0 Exploratory Data Analysis | 31DEC15 | TBD | TBD |
| 060123 | Understanding Optimal Decision-making in War-gaming III | 31DEC15 | TRAC-M-TM-15-030 | \$ 124,000.00 |
| 060114 | Conflict Prediction Through Geo-Spatial Interpolation of Radicalization in Syrian Social Media | 31DEC15 | TRAC-M-TM-15-031 | \$ 98,000.00 |
| 060113 | Validating the FOCUS Model Through an Analysis of Identity Fragmentation in Nigerian Social Media | 31DEC15 | TRAC-M-TM-15-032 | \$ 61,000.00 |
| 060119 | The Logistics Battle Command (LBC) Attrition Model | 13MAY16 | TBD | TBD |

Table 1 shows the list of TRAC-MTRY projects completed in FY15 along with technical report or memorandum numbers published in support of those projects. The matrix in Figure 1 shows the number of impacts in each analysis category for the categories of topic,

technology, and methodology contributed by the TRAC-MTRY work program. The impacts are counted by examining which topics, technologies, or methodologies each project researches. Each topic, technology, or methodology is then judged to contribute to one or more of the 5 TRAC analysis or work program categories.

| | Topics | Technology | Methodology |
|---------------------------|--------|------------|-------------|
| TRAC Analysis | 2 | 2 | 1 |
| External Support | 3 | 1 | 1 |
| Method & Data Improvement | 4 | 2 | 5 |
| Model Improvement | 0 | 1 | 2 |
| Organization Improvement | 2 | 1 | 2 |

Figure 1. Impacts of Topics, Technologies, and Methodologies of completed FY15 projects interrelated with TRAC work categories.

The chart found at Figure 1 summarizes the impacts of fourteen FY15 projects across the three focus areas effecting the five TRAC work categories. The FY15 work program included five total topics, three total technologies, and eight total methodologies. A complete listing of these topics, technologies, and methodologies cross walked with the project that produced it and the particular TRAC work categories that it impacted is given at Appendix A. The impacts to TRAC spread fairly evenly across the work categories, with a slightly higher impact to Method and Data Improvement, which can have a great impact on how TRAC conducts major studies.

Chapter 3 FY16 TRAC Research Elicitation

Methodology

Internal Research Elicitation. In July 2015, formal interviews were conducted at the directorate level at each TRAC center, to include the directors of each center and with the director of TRAC. These interviews consisted of asking leading questions to prompt the interviewees about what interesting research ideas they had in the areas of topics, technologies, and methodologies. An interview questionnaire was used to help guide the discussion. The questionnaire can be found at B In addition to these interviews with the leadership of TRAC, a survey was conducted, using an on-line survey on Sharepoint, of the entire workforce. Specifically, the survey asked respondents to provide any ideas they might have for research, how they would prioritize that research, and list of potential stakeholders for the research idea. The results of the interviews and survey responses are shown in the spreadsheet at C.

The formal portion of the elicitation helped determine whether the current TRAC FY15 Research Objectives should be modified to become TRAC FY16 Research Objectives. There is one recommended change to the TRAC Research Objectives suggested by the formal portion of the research elicitation. The recommended FY16 TRAC Research Objectives:

- 1. Tradespace
- 2. Analytics
- 3. TRAC Models and Simulations Improvement (changed from CXXI, AWARS, LBC)
- 4. OneTRAC
- 5. Human Dimensions
- 6. Cyber

Several topics, technologies, and methodologies were also identified as being important for TRAC and placed under consideration to become part of a TRAC-MTRY research project. These are listed below:

Topics:

- 1. Improvement of collaboration and sharing of study and research data, results, and methodologies.
- 2. Improved Mission Command modeling.

Technologies:

1. Technologies that improve collaboration and sharing of study and research data, results, and methodologies.

Methodologies:

- 1. Development of generalized tools based on TRAC-MTRY research that other centers can apply.
- 2. DOTMLPF analysis improvement.
- 3. TRAC-wide survey of routinely produced TRAC analyses and ways to improve.
- 4. Develop representation of robotic or unmanned systems in TRAC combat models.
- 5. Improved representation of risk to decision makers.
- 6. Development of a TRAC modeling and simulation strategy that provides a plan for development of new models and simulations over the next ten to twenty years.
- 7. Innovative visualization techniques and their application within TRAC.

External Research Elicitation. In addition to the formal elicitation internal to TRAC, TRAC-MTRY conducts a review of research project ideas proposed from various sources. Those sources include extensions of ongoing NPS faculty research that may align with TRAC research priorities, conferences such as the MORS symposium or the FA49 symposium, meetings with various DoD and Army agencies, and continuation of past TRAC-MTRY research efforts. From these sources, TRAC-MTRY is able to find potential external sponsors interested in results of the research whose topic, technology, or methodology will also benefit TRAC.

Chapter 4 FY16 Proposed TRAC-Monterey Work Program

Table 1 shows the currently proposed FY16 Project list. This list was developed using the topic, technology, methodology framework discussed throughout this paper.

Table 1. FY16 Proposed Project List including funding and sponsors.

| Project Code | Project Name | End Date | Funding | Sponsor |
|--------------|--|----------|-----------|----------------------|
| 090089 | TRAC Searchable Research Library | 12DEC15 | \$200,000 | TRAC |
| 060119 | The Logistics Battle Command (LBC) Attrition Model | 13MAY16 | \$130,000 | TRAC-LEE |
| 020309 | Force 2025 and Beyond Strategic Quick-Turn Force Design Analytic Model | 11AUG16 | \$200,000 | TRAC |
| 060314 | Crowd Behavior Algorithm Development | 21JUL16 | \$150,000 | TRAC |
| 060315 | Cognitive Agility Measurement in a Complex Environment | 19AUG16 | \$200,00 | TRAC |
| 060311 | GAT 2.0 Predictive Modeling Analysis III | 30SEP16 | \$75,000 | Army Analytics Group |
| 060312 | Cross Service Cost Estimation Metrics | 30SEP16 | \$0 | TRAC-WSMR |
| TBD | COMBATXXI Behavior Validation Implementation | 30SEP16 | \$96,000 | ARL/HRED |
| TBD | Commander's Social Media Situational Awareness Model | 30SEP16 | \$100,000 | AAG |
| 060317 | Precision Munition Effect Representation | 30SEP16 | \$150,000 | DAMO-TRA |
| 060318 | TRAC Common Product Innovative Visualization Techniques | 30SEP16 | \$0 | TRAC-FLVN |
| 060313 | Network Integration Exercise SMERT Analysis | 01OCT16 | \$100,000 | TRAC |
| 060316 | Metrics for Systems Thinking in Irregular Warfare | 01OCT16 | \$100,000 | TRAC |

The impacts of this proposed work program are shown in Figure 1. The chart summarizes impacts of thirteen FY16 Projects across three focus areas effecting five categories. Within the thirteen projects, there are 6 total topics, 6 total technologies, and 17 total methodologies that each have an impact in the five TRAC work categories. The impact cross-walk spreadsheet can be found at Appendix D.

Refer to Impact Spreadsheet for FY16 projects - in appendix

| | Topic | Technology | Methodology |
|---------------------------|-------|------------|-------------|
| TRAC Analysis | 2 | 3 | 5 |
| External Support | 5 | 2 | 7 |
| Method & Data Improvement | 6 | 6 | 12 |
| Model Improvement | 1 | 2 | 5 |
| Organization Improvement | 1 | 2 | 3 |

Figure 1. Impacts of Topics, Technologies, and Methodologies of completed FY15 projects interrelated with TRAC work categories.

Chapter 5 Summary and Conclusions

Summary

TRAC-MTRY conducts an in-depth study annually to provide TRAC recommendations on the priorities of research and analysis and develop a research work program for TRAC-MTRY that delivers the greatest impact to TRAC, TRADOC, and the Army possible. This research elicitation takes place both formally and informally and results in the proposed following fiscal year work program. TRAC-MTRY's work program is then measured using the topics, technologies, and methodologies framework.

Conclusions

The FY15 TRAC-MTRY work program had impact in the areas of method and data improvement, specifically in data analytics methodologies, human dimension analysis, measurement space analysis, technologies of the Person Data Event (PDE) system, GINA/Dragon Pulse, and the Executable Architecture Systems Engineering (EASE) system. The FY16 work program is planned to continue work with the PDE and GINA, and investigate more data analytics, wargaming, and data visualization methodologies. The work program remains flexible by not completely using the FY16 total analyst capacity up front. Instead, some room is left to conduct short-term or quick-turn analyses that may be required by TRAC, TRADOC, or the Army. Additionally, there is room if further funding becomes available for projects that fit TRAC research priorities and provide acceptable impact to TRAC. That is not to say that TRAC-MTRY does not have a challenging work program lined up for FY16. Rather, the FY16 work program promises to provide a large future impact to TRAC analysis and will be challenging to complete given the timing and resources required of several of the projects. Further, the FY16 TRAC-MTRY work program offers some great opportunities to expand knowledge sharing and to integrate into the analytic work being conducted by the rest of the TRAC centers through stakeholder interaction, continued TRAC-MTRY support for measurement space drills, and engagement with the TRAC centers on past research conducted to help improve OR analysis across the organization.

Appendix A FY15 Work Program Impact Crosswalk

The tables below show the impact cross walk of topics, technologies, and methodologies for each FY15 project and the impact to the TRAC work categories for each.

3. Method and Data Improvement

4. Model Improvement

5. Organizational Improvement

1. TRAC Analysis

2. External Support

Appendix B Research Elicitation Questionairre

NOTE: Below questionnaire was used as a guide to help keep the interview on track. If sufficient discussion was taking place without going beyond the scope of the interview, these questions were not needed.

FY16 TRAC Research Requirements Elicitation Interviews

Interview Guide:

- 1. Describe a research requirement in the areas of topics, techniques, and methodologies.
- 2. Which TRAC center(s)/ Directorate would most likely be a stakeholder?
- 3. With regards to OneTRAC, what is the priority of this research?
- 4. What are your top three priorities for this next FY?
- 5. Of the research requirements, what priority order would you assign this need?
- 6. How relevant are the current research objectives? What about in the context of 2025B?
- 7. What dates in the past year did you have a measurement space drill and what venue was used (onsite, VTC, DCO, etc.)?
- 8. Please make sure to complete the survey on-line.
- 9. Brief remarks on progress on research from FY15 to interviewee.

NOTES ON QUESTION: (Can mark note with number of question or mark other/misc):

| | | | | The identified problem is, how do we assess operational | |
| | | | | benefit between alternatives when either we don't have the | |
| | | | | resources (time) to execute combat simulation, or when | |
| | | | | the nature of the differences in alternates won't be revealed | |
| | | | | through combat simulation. Or if we survey SMEs about | |
| | | | | relative benefits of alternatives along some measurement | |
| | | | | scale, then the results are typically understood as an | |
| | | | | alternatives benefit relative to other alternatives. The idea | |
| | | | | was an approach to operational benefit akin to an | |
| | | | | expected value problem. If the study team could identify a | |
| | | | | 'use case' or situation in a vignette, identify the discrete | |
| | | | | events in that use case, gather probabilities of those events | |
| | | | | occuring, identify the outcomes associated with those | |
| | | | | events, then the team may be able to assess expected | |
| | | | | outcome of the use case/ vignette with different | |
| | | | | alternatives. The probabilities and outcomes would be specific to each alternative. Research areas for this idea | |
| | | | | would be: how to link a bunch of possible events into an | |
| | | | | expected outcome problem, especially if the probability of | |
| | | | | the next event occuring was conditional on the outcome of | |
| | | | | the previous event; what is the right data source to inform | |
| | | | | the probabilities of events and outcomes for each | |
| | | | | alternative (SME, AMSAA, simulation output, etc); and | |
| | Probabilistic approach to operational benefit | | | how could TRAC socialize this method to be a credible | CXXI, AWARS, |
| 74 | analysis | | OneTRAC | and accepted methodology among our customers. | LBC |
| | | | | Update the Assignment and Scheduling of Capabilities - | |
| | | | | Unmanned (ASC-U) model to better represent manned | |
| | | | | aviation systems. | |
| | | | | Background: TRAC-FLVN used ASC-U for previous | |
| | | | | aviation-related studies (including an AoA). Current | |
| | | | | studies make continued use of this analytic tool, but | |
| | | | TRAC-FLVN; | require substantial modifications to adequately represent | CXXI, AWARS, |
| 75 | Update to ASC-U | | TRAC-MTRY | manned aircraft, rather than unmanned systems. | LBC |
| | | | | Much of our revolves around providing decision makers | |
| | | | | with a cost vs performance evaluation. Many times are | |
| | | | | results do not adequately account for how alternatives | |
| | | | | operationally impact the force especially when the | |
| | Englished on SEcond C | | TD AC TVC TO | alternatives are composed of various degrees of materiel | T 1 |
| /6 | Evaluation of Formation performance | | TRAC-WSMR | and non-materiel solutions. | Tradespace |

| | | | D-4 | | |
|------|---|-------------|---------------------------|--|-----------------------|
| # | Торіс | Short Title | Potential Stakeholders | Remarks/Clarifications | Туре |
| | • | | | A systematic approach that describes the nature of the | |
| | | | | residuals when applying regression techniques. The | |
| | | | | research would provide specific steps needed to assess | |
| | | | | the residuals. The research would show examples of | |
| | | | | different distributions of residuals and describe 1) the | |
| | | | | effect on the regression equation fit/confidence, and 2) | |
| | Assessing the residuals in single variate and | | | other techniques that may be applied to improve the | |
| 77 | multivariate regression | | OneTRAC | fit/confidence of the regression equation | Analytics |
| | | | | | |
| | | | | This research would deliver R code that would produce | |
| | | | | best-practice data graphs describing the nature of a data | |
| | | | | set. The code would be created to run with minimal input | |
| | | | | labor, easily accept numeric and textual fields from a data | |
| | | | | set and then yield all the graphs/stats needed to understand | |
| | | | | every field of a dataset: histograms, box & whisker, | |
| | Standard R Code for visualizing descriptive | | | relevant descriptive stats, outliers. The exact graphs/output | |
| 78 | statistics | | OneTRAC | would be ever evolving as analysts submit improvements. | Analytics |
| | | | | I suspect this could be written in R or any programming | |
| | | | | language, or as part of a database. The code has an | |
| | | | | intuitive front end and easily accepts data. The code can | |
| | | | | assess each entry in a dataset and then offers techniques to | |
| | | | | apply to dispense with outliers or an error. In the simplest | |
| | | | | example, if an error is found in a single entry, the code | |
| | | | | offers to: 1) replace the error with median/mode and keep | |
| | | | | the rest of the data in that line, or 2) remove the entire line | |
| 79 | Data Munging Techniques | | OneTRAC | of data associated with the error entry | Analytics |
| | | | | Research that would yield some standard interactive | |
| | | | | graphics allowing a user to change values of one variable | |
| | | | | and see the corresponding change to multiple other | |
| | | | | variables. This research is pretty wide open. This research | |
| | | | | assumes that some TRAC analysis is best understood with | |
| 80 | Interactive Graphics | | OneTRAC | an interactive graphic. | Analytics |
| | | | | The Army Operating Concept mentions that optimizing | |
| | | | | human performance is one of its most critical aspects. A | |
| | | | | key line of effort in the human dimension operational | |
| | | | | approach is cognitive dominance, which is the ability of a | |
| | | | | leader to gain an intellectual advantage over an adversary. | |
| | | | | The Army has spent an inordinate amount of time | |
| | | | OneTRAC; | developing Soldiers physically, however there is little to no | |
| | | | MEDOCM: | training support for cognitive development. In similar fashion to how Luminosity develops brain training games, | |
| | Develop brain training games to facilitate | | Army Research | the Army needs to modify these concepts to a military | |
| 21 | leader development | | Laboratories | context. | Human Dimensions |
| - 51 | action development | | Lacoratories | How does TRAC-MTRY fit into this concept? Education | Transmi Difficiisions |
| | | | | vs. Training? What is TRAC-MTRY at MTRY and not at | |
| | | | | FLVN? Mr. Bauman's white paper on history of the | |
